New in the Schaeffler Vehicle Lifetime Solutions portfolio: Multi-ribbed belts for front end auxiliary drives in heavy commercial vehicles

FRANKFURT, 2026-06-09.

- Expanded range for auxiliary drive systems for trucks and buses
- New INA FEAD belts specifically developed to meet the high demands of heavy-duty applications
- High load capacity, efficient power transmission, and long service life

Schaeffler Vehicle Lifetime Solutions is expanding its range for auxiliary drive systems under the INA brand in trucks and buses: In addition to the pulleys and tensioners already available, the company is now expanding its portfolio with a new multi-ribbed belt in OE-quality. Developed specifically for the demanding requirements of modern commercial vehicle engines, the belt combines high reliability with long service life. It is available for widely used vehicle models from Mercedes-Benz, MAN, DAF, Volvo, Scania, Iveco, and Renault.

Developed for increasing demands in heavy commercial vehicles

With the new INA FEAD belts, Schaeffler Vehicle Lifetime Solutions provides the right answer to the increasing demands of today's engines. The belt is designed for high mechanical loads, high torque, and continuous stress. Its flat design with multiple longitudinal ribs enables efficient power transmission even under high loads. In addition, it is particularly wear-resistant and resistant to heat and environmental influences. The belt's key strength element, the cord fabric, is made of high-strength polyester and thus ensures high elongation resistance and constant belt tension.

Future-proof multi-ribbed belt solution

All belts are made of certified EPDM rubber and are designed for reliable performance throughout their entire lifecycle – even under demanding operating conditions. “Under the INA brand, Schaeffler Vehicle Lifetime Solutions offers reliable, economical, and workshop-friendly solutions for auxiliary drive systems in trucks and buses. Our durable products help reduce downtime and get vehicles back on the road quickly. With the new INA FEAD belts, we are consistently expanding our portfolio for heavy commercial vehicles,” says Samuel Braun, Vice President Commercial Vehicles at Schaeffler Vehicle Lifetime Solutions.

Technical expertise for workshops and fleets

Schaeffler Vehicle Lifetime Solutions supports workshops and fleet operators not only with the right products, but also with the necessary expertise for their optimal use – from proper handling and storage to clear installation instructions, technical information, and visual support. “With our holistic approach, we help extend belt service life, identify wear at an early stage, and prevent unplanned downtime. Reliability in fleet operations is created through the interaction of durable components, correct handling, market-oriented repair solutions, and technical expertise. That is exactly the goal of every fleet operator,” says Braun.

Schaeffler Group – We pioneer motion: The Schaeffler Group has been driving forward groundbreaking inventions and developments in the field of motion technology for 80 years. With innovative technologies, products, and services for electric mobility, CO₂-efficient drives, chassis solutions and renewable energies, the company is a reliable partner for making motion more efficient, intelligent, and sustainable – over the entire life cycle. Schaeffler describes its comprehensive range of products and services by means of eight product families: From bearing solutions and all types of linear guidance systems through to repair and monitoring services. Schaeffler is with around 110,000 employees and more than 250 locations in 55 countries, one of the world's largest family-owned companies and one of Germany's most innovative companies.
